---

Mobile patent grants as a percentage of the total patent grants in a given year have risen significantly for the US market indicating the importance innovators attach to mobile in their business. In the US, one out of every five patent granted in 2012 was related to mobile. Less than a decade ago, this number was less than 10%. The European market has seen lower growth relative to the US market. Roughly one out of every ten patents granted in Europe are mobile related.
